

PS12B Mercury Sorbent Traps

Simplifying Hg

Performance Specification 12B allows you to use Sorbent Traps as a Continuous Emissions Mercury Monitor and report the results. This method is the most cost-effective way to measure mercury.

Ohio Lumex Sorbent Traps are backed with over 20 years of expertise in mercury measurement and extensive field testing. Through our years of experience, we have learned that no two sources are the same. Some require a custom sorbent trap solution, but it doesn't cost you any more.

Features and Benefits

- Ohio Lumex PS12B traps are specially made for long term sampling (7+ days)
- The third section is pre-spiked with elemental Hg at any customized level
- Often custom made to the stack conditions of the source
- Zero breakthrough and high spike recoveries for extended test periods in wet and dry stack conditions
- Every trap as well as its chain of custody gets an individual barcode
